Antibodies for Accurate Detection of Phospho-Proteins

Phosphoproteins comprise 10-20% of the proteome, and are critical elements in human diseases such as Alzheimer's and cancer. The detection and quantitation of phosphoproteins is of great utility in further understanding the role of protein phosphorylation in cellular processes and in the progression of human diseases. Abbiotec's phospho-specific antibodies are specifically designed to eliminate cross-reactivity and to produce results of the highest quality.
