Platelets

Specific Tools for Hematology and Plasma Research

Blood proteomics has become increasingly powerful in disease diagnosis, therapeutic monitoring, and clinical chemistry. Abbiotec offers over 100 antibodies to human plasma proteins. These antibodies are suitable for the quantitative analysis of physiologically significant mammalian proteins, including biomarkers for disease and cell-specific antigens. Check our website for fluorochrome- and enzyme-conjugated formats available for ELISA, Western blot, immunohistochemistry, flow cytometry and immunofluorescence applications.

Biomarkers	Bone Gla Protein, CD71, CEA, hCG, CRP, LHRH, LSH, NGAL, PAPP-A, PHM, VIP
Carriers	Albumin, Alpha-Fetoprotein, Apo A, Apo B, Apo D, Apo E, Apo O, Butyrylcholinesterase, Collectin-43, Gc-Globulin, Gelsolin, Haptoglobin, Hemoglobin, Hemopexin, KLH, Lactotransferrin, LDL, Ovalbumin, Transthyretin
Coagulation	Alpha-1 Antitrypsin, Annexin V, Antichymotrypsin, Antithrombin III, D-dimer, Factor VIII, Factor IX, Fibrinogen, Hirudin, Protein C, Protein S, Prothrombin, Tetranectin, Thrombin, Vitronectin, VWF
Complement	C1s, C1 Inh, C2, C3, C3a, C4, C5a, C5b-9, C9, CD235a, CRP, Factor B, Factor D, Factor H, Factor I, Collectin-43, Conglutinin, Ficolin, Mannan-binding lectin, Properdin
Globulins	Gc-Globulin, IgA, IgE, IgG, IgM, kappa, lambda, Beta2-Microglobulin
Platelets	CD9, CD31, CD36, CD41, CD42b, CD61, CD62P, EPO, PDGF-A, PDGF-B, PDGF-C
